* Figures are for the number of times each database was accessed, and not the number of searches initiated. A single access to OCLC First Search, for example, may result in several searches. (During the 86,464 search sessions of OCLC First Search, 244,432 searches were conducted.)

** Most WWW searches of the Library catalogs are counted on a per search, rather than a search session basis. For the number of searches of the Library catalog, see Table VII.
