
ACTIVATE the MFH APPROACH

(a less ambitious version of the solution proposed by Melissa Beck in *Cataloging and Classification Quarterly*, v. 9, no. 2 (1988)

Program sets "ownership subfield" in each linking field (780, 785, and 776) that finds a matching record in a search by control number. (Program can be rerun periodically). Could also set format from any 007 in linked record. Another program is run to cause the MFH record to display any linking title owned, along with the appropriate label as a hotlink to the HOLDINGS of the linked record, e.g., **More holdings**: Earlier title: Later title: Other format (Microfilm): This process might be extended one more level by also searching 776 on the linked successive title, to display, for example, Earlier title (Microfilm); Later title (CD-ROM)

Key:

- Bib-MFH link
- Chronological (successive) relationship
- Horizontal (other format) relationship
